

Elio Iannetti, MD. Nephrologist.

Director of the Delta Nephrology and Hemodialysis Center, in Catania, specialist in nephrology. He deals with problems related to chronic kidney disease and its preventive management with diet and pharmacological therapy. He has conducted research for over twenty years on diet, in health and disease, with reference to both gynecological and oncology pathologies. Focus is on:

- bone disease due to secondary hyperparathyroidism in dialysis patients,
- uremic anemia and its correction with the use of recombinant human erythropoietin,
- nutritional problems of chronic uremic patients,
- the evaluation of body composition, changes in fluid compartments and changes in cardiac function in relation to them, through the application of bio-impedance analysis;
- various aspects relating to the evaluation of the quality of life of hemodialysis patients.
